Progressive Web App

Performance

Metrics

First Contentful Paint

1.5 s

First Contentful Paint marks the time at which the first text or image is painted. <u>Learn more</u>.

Speed Index

1.5 s

Speed Index shows how quickly the contents of a page are visibly populated. <u>Learn more</u>.

Largest Contentful Paint

1.7 s

Largest Contentful Paint marks the time at which the largest text or image is painted. <u>Learn more</u>

Time to Interactive

1.8 s

Time to interactive is the amount of time it takes for the page to become fully interactive. <u>Learn more</u>.

Total Blocking Time

70 ms

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds. <u>Learn more</u>.

Cumulative Layout Shift

Cumulative Layout Shift measures the movement of visible elements within the viewport. <u>Learn more</u>.

Values are estimated and may vary. The <u>performance score is calculated</u> directly from these metrics. <u>See calculator.</u>

View Treemap

Show audits relevant to: All FCP LCP TBT CLS

Diagnostics — More information about the performance of your application. These numbers don't <u>directly affect</u> the Performance score.

■ Minimize main-thread work — 3.4 s

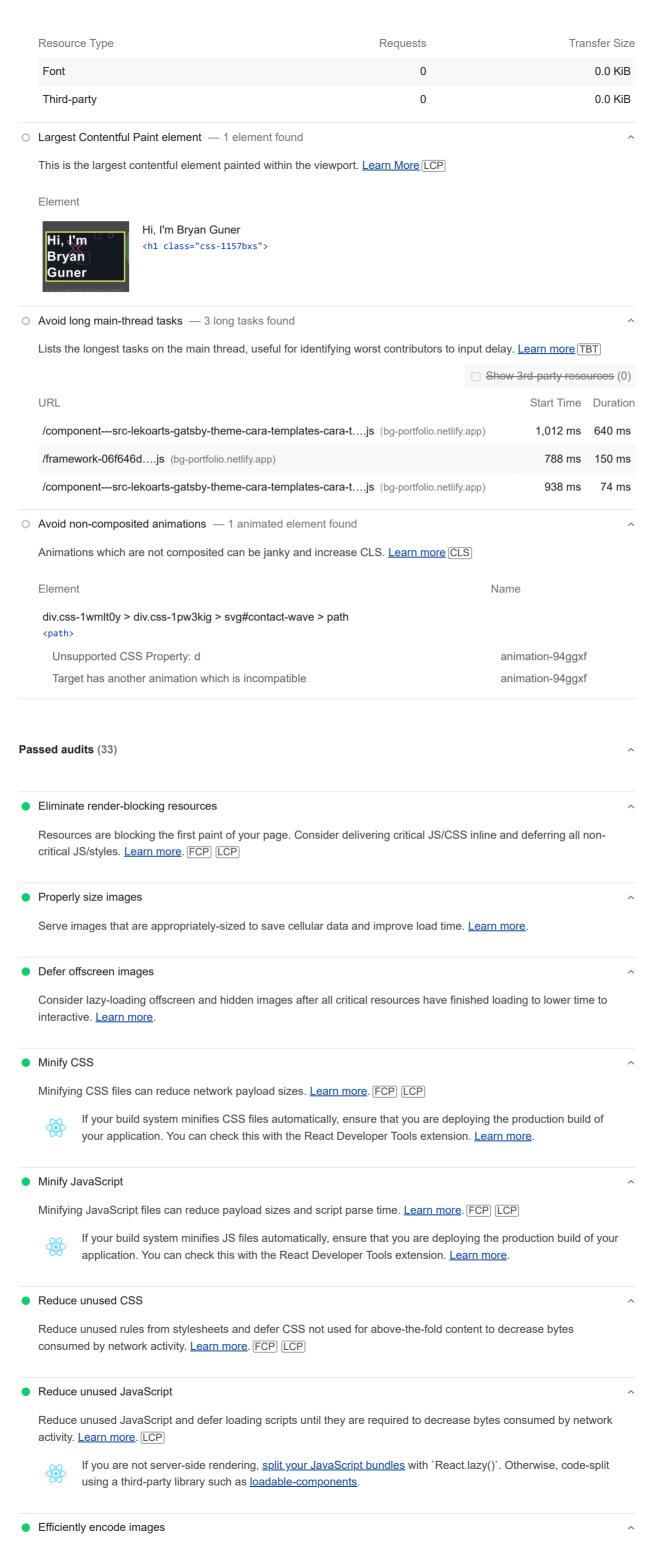

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more TBT</u>

Category	Time Spent
Script Evaluation	1,272 ms
Style & Layout	877 ms
Other	574 ms
Rendering	542 ms
Script Parsing & Compilation	59 ms
Garbage Collection	22 ms
Parse HTML & CSS	12 ms

 $\, \bigcirc \,$ Keep request counts low and transfer sizes small $\, -$ 15 requests • 215 KiB

To set budgets for the quantity and size of page resources, add a budget.json file. <u>Learn more</u>.

Resource Type	Requests	Transfer Size
Total	15	214.8 KiB
Other	10	107.4 KiB
Script	4	103.5 KiB
Document	1	3.8 KiB
Stylesheet	0	0.0 KiB
Image	0	0.0 KiB
Media	0	0.0 KiB

Optimized images load faster and consume less cellular data. Learn more.

 Serve images in next-gen formats Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. Learn more. Enable text compression Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. Learn more. FCP LCP Preconnect to required origins Consider adding 'preconnect' or 'dns-prefetch' resource hints to establish early connections to important third-party origins. Learn more. FCP LCP Initial server response time was short — Root document took 110 ms Keep the server response time for the main document short because all other requests depend on it. Learn more. FCP LCP If you are server-side rendering any React components, consider using `renderToNodeStream()` or `renderToStaticNodeStream()` to allow the client to receive and hydrate different parts of the markup instead of all at once. Learn more. **URL** Time Spent 110 ms https://bg-portfolio.netlify.app Avoid multiple page redirects Redirects introduce additional delays before the page can be loaded. Learn more. FCP LCP If you are using React Router, minimize usage of the `<Redirect>` component for route navigations. Preload key requests Consider using `k rel=preload>` to prioritize fetching resources that are currently requested later in page load. Learn more. FCP LCP Use video formats for animated content Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more LCP Remove duplicate modules in JavaScript bundles Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. TBT Avoid serving legacy JavaScript to modern browsers — Potential savings of 0 KiB Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. Learn More TBT □ Show 3rd-party resources (0) Potential URL Savings /component---src-lekoarts-gatsby-theme-cara-templates-cara-t....js (bg-0.1 KiB portfolio.netlify.app) /component---src-lekoarts-gatsby-theme-cara-templates-cara-@babel/plugint....js:1:87148 (bg-portfolio.netlify.app) transform-classes $/app-8fe597f....js \ (\hbox{bg-portfolio.netlify.app})$ 0.0 KiB @babel/plugin-/app-8fe597f....js:2:50550 (bg-portfolio.netlify.app) transform-classes Preload Largest Contentful Paint image Preload the image used by the LCP element in order to improve your LCP time. Learn more. LCP Avoids enormous network payloads — Total size was 215 KiB Large network payloads cost users real money and are highly correlated with long load times. Learn more. LCP ☐ Show 3rd-party resources (0) **URL** Transfer Size /framework-06f646d....js (bg-portfolio.netlify.app) 38.1 KiB /framework-06f646d....js (bg-portfolio.netlify.app) 38.0 KiB /app-8fe597f....js (bg-portfolio.netlify.app) 34.6 KiB /app-8fe597f....js (bg-portfolio.netlify.app) 34.6 KiB

Transfer Size URL

Lises efficient cache policy on static assets	
d/260json (bg-portfolio.netlify.app)	0.8 KiB
/webpack-runtime-6469c61js (bg-portfolio.netlify.app)	1.7 KiB
/webpack-runtime-6469c61js (bg-portfolio.netlify.app)	1.7 KiB

/componentsrc-lekoarts-gatsby-theme-cara-templates-cara-tjs (bg-portfolio.netlify.app)	29.1 KiB
/componentsrc-lekoarts-gatsby-theme-cara-templates-cara-tjs (bg-portfolio.netlify.app)	29.2 KiB

Uses efficient cache policy on static assets — 0 resources found

A long cache lifetime can speed up repeat visits to your page. Learn more.

Avoids an excessive DOM size — 235 elements

A large DOM will increase memory usage, cause longer <u>style calculations</u>, and produce costly <u>layout reflows</u>. <u>Learn</u> more. [TBT]

Consider using a "windowing" library like `react-window` to minimize the number of DOM nodes created if you are rendering many repeated elements on the page. Learn more. Also, minimize unnecessary re-renders using <u>`shouldComponentUpdate`</u>, <u>'PureComponent'</u>, or <u>'React.memo'</u> and <u>skip effects</u> only until certain dependencies have changed if you are using the 'Effect' hook to improve runtime performance.

	Statistic	Element	Value
	Total DOM Elements		235
	Maximum DOM Depth	<pre>bryan.guner@gmail.com </pre>	14
	Maximum Child Elements	div > div > div > div > div.css-1vliepz <div class="css-1vliepz" style="position: absolute; background-size: auto; background-repeat: no-repeat; w"></div>	14
)	Avoid chaining critica	I requests	^

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn more. FCP LCP

Maximum critical path latency: 110 ms

Initial Navigation

https://bg-portfolio.netlify.app - 110 ms, 3.83 KiB

User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more.

Use the React DevTools Profiler, which makes use of the Profiler API, to measure the rendering performance of your components. Learn more.

JavaScript execution time — 1.3 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more</u>. TBT

	□ Sho	w 3rd-party reso	urces (0)
URL	Total CPU Time	Script Evaluation	Script Parse
https://bg-portfolio.netlify.app	1,619 ms	16 ms	5 ms
lem:componentsrc-lekoarts-gatsby-theme-cara-templates-cara-tjs \$\$(bg-portfolio.netlify.app)\$	1,414 ms	1,069 ms	32 ms
/framework-06f646djs (bg-portfolio.netlify.app)	160 ms	145 ms	10 ms
Unattributable	116 ms	12 ms	1 ms

All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more. FCP LCP

Minimize third-party usage

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn more</u>. <u>TBT</u>

Lazy load third-party resources with facades

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. Learn more. TBT

O Largest Contentful Paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more.

0	Avoid large layout shifts These DOM elements contribute most to the CLS of the page. CLS	^
•	Uses passive listeners to improve scrolling performance Consider marking your touch and wheel event listeners as `passive` to improve your page's scroll performance. Learn more.	^
	Avoids document.write() For users on slow connections, external scripts dynamically injected via `document.write()` can delay page load by tens of seconds. Learn more.	^
0	Image elements have explicit width and height Set an explicit width and height on image elements to reduce layout shifts and improve CLS. Learn more CLS	^
	Has a <meta name="viewport"/> tag with width or initial-scale A ` <meta name="viewport"/> ` not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input. Learn more. (TBT)	^

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. ^ Learn more in our guide on conducting an accessibility review. O The page has a logical tab order Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more. O Interactive controls are keyboard focusable Custom interactive controls are keyboard focusable and display a focus indicator. Learn more. Interactive elements indicate their purpose and state Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn more. O The user's focus is directed to new content added to the page If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn more. O User focus is not accidentally trapped in a region A user can tab into and out of any control or region without accidentally trapping their focus. Learn more. Custom controls have associated labels Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. Learn more. Custom controls have ARIA roles Custom interactive controls have appropriate ARIA roles. Learn more. O Visual order on the page follows DOM order DOM order matches the visual order, improving navigation for assistive technology. Learn more. Offscreen content is hidden from assistive technology Offscreen content is hidden with display: none or aria-hidden=true. Learn more. O HTML5 landmark elements are used to improve navigation Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more.

Passed audits (17)

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. Learn more.

[aria-hidden="true"] is not present on the document <body> Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document `<body>`. Learn more. [aria-*] attributes have valid values Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more. [aria-*] attributes are valid and not misspelled Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more. Buttons have an accessible name When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. Learn more. • The page contains a heading, skip link, or landmark region Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. Learn more. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn more. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more. • [id] attributes on active, focusable elements are unique All focusable elements must have a unique 'id' to ensure that they're visible to assistive technologies. Learn more. Heading elements appear in a sequentially-descending order Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. Learn more. <html> element has a [lang] attribute If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more. html> element has a valid value for its [lang] attribute Specifying a valid <u>BCP 47 language</u> helps screen readers announce text properly. <u>Learn more</u>. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn more. • Lists contain only elements and script supporting elements (<script> and <template>). Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. Learn more. • List items () are contained within or parent elements Screen readers require list items ('') to be contained within a parent '' or '' to be announced properly. Learn more. $[user-scalable="no"] \ is \ not \ used \ in \ the \ < meta \ name="viewport"> element \ and \ the \ [maximum-scale] \ attribute \ is \ not \ less \ than$ Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more. No element has a [tabindex] value greater than 0 A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. Learn more.

Not applicable (27)

0	[accesskey] values are unique	^
	Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. <u>Learn more</u> .	
0	button, link, and menuitem elements have accessible names	^
	When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	
0	[aria-hidden="true"] elements do not contain focusable descendents	^
	Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. <u>Learn more</u> .	
0	ARIA input fields have accessible names	^
	When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	
0	ARIA meter elements have accessible names	^
	When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	
0	ARIA progressbar elements have accessible names	^
	When a `progressbar` element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	
0	[role]s have all required [aria-*] attributes	^
	Some ARIA roles have required attributes that describe the state of the element to screen readers. <u>Learn more</u> .	
0	Elements with an ARIA [role] that require children to contain a specific [role] have all required children.	^
	Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. <u>Learn more</u> .	
0	[role]s are contained by their required parent element	^
	Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. <u>Learn more</u> .	
0	[role] values are valid	^
	ARIA roles must have valid values in order to perform their intended accessibility functions. <u>Learn more</u> .	
0	ARIA toggle fields have accessible names	^
	When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	
	ADIA	
0	ARIA tooltip elements have accessible names	^
0	When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.	^

0	<object> elements have [alt] text</object>	^
	Screen readers cannot translate non-text content. Adding all text to ` <object>` elements helps screen readers convey meaning to users. <u>Learn more</u>.</object>	
0	Cells in a element that use the [headers] attribute refer to table cells within the same table.	^
	Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. <u>Learn more</u> .	
0	elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.	^
	Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. <u>Learn more</u> .	
0	[lang] attributes have a valid value	^
	Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn more</u> .	
0	<video> elements contain a <track/> element with [kind="captions"]</video>	^
	When a video provides a caption it is easier for deaf and hearing impaired users to access its information. Learn more	<u>)</u> .

Best Practices Trust and Safety O Ensure CSP is effective against XSS attacks A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. Learn more Description Directive Severity No CSP found in enforcement mode High Passed audits (17) Uses HTTPS All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding mixed content, where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. Learn more. Links to cross-origin destinations are safe Add `rel="noopener"` or `rel="noreferrer"` to any external links to improve performance and prevent security vulnerabilities. Learn more. Avoids requesting the geolocation permission on page load Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. Learn more. Avoids requesting the notification permission on page load Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. Learn more. Avoids front-end JavaScript libraries with known security vulnerabilities Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. Learn more. Allows users to paste into password fields Preventing password pasting undermines good security policy. <u>Learn more</u>. Displays images with correct aspect ratio Image display dimensions should match natural aspect ratio. Learn more. Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. Learn

more.

	Page has the HTML doctype	^
	Specifying a doctype prevents the browser from switching	to quirks-mode. <u>Learn more</u> .

Progressive Web App

These checks validate the aspects of a Progressive Web App. <u>Learn more</u>.

①	Installable	
•	Web app manifest and service worker meet the installability requirements Service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. With proper service worker and manifest implementations, browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. <u>Learn more</u> .	^
	PWA Optimized	
•	Registers a service worker that controls page and start_url	^
	The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. <u>Learn more</u> .	
•	Redirects HTTP traffic to HTTPS	^
	If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. <u>Learn more</u> .	
•	Configured for a custom splash screen	^
	A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. <u>Learn more</u> .	
•	Sets a theme color for the address bar.	^
	The browser address bar can be themed to match your site. <u>Learn more</u> .	
•	Content is sized correctly for the viewport	^
	If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. <u>Learn more</u> .	
•	Has a <meta name="viewport"/> tag with width or initial-scale	^
	A ` <meta name="viewport"/> ` not only optimizes your app for mobile screen sizes, but also prevents <u>a 300 millisecond</u> <u>delay to user input</u> . <u>Learn more</u> . TBT	
•	Provides a valid apple-touch-icon	^
	For ideal appearance on iOS when users add a progressive web app to the home screen, define an `apple-touch-icon`. It must point to a non-transparent 192px (or 180px) square PNG. <u>Learn More</u> .	
A	Manifest doesn't have a maskable icon	^
	A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. <u>Learn more</u> .	
	ditional items to manually check (3) — These checks are required by the baseline PWA Checklist but are not omatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.	^
0	Site works cross-browser	^
	To reach the most number of users, sites should work across every major browser. <u>Learn more</u> .	
0	Page transitions don't feel like they block on the network	^
	Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. <u>Learn more</u> .	
0	Each page has a URL	^
	Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. <u>Learn more</u> .
